

This is the user guide for Songs application!

When running a program you will see the list of options in range 1 to 5.

To choose the option you need to type the number of that option and press Enter.

All inputs, except digits, should be in Title Case and with no spaces between the words! -->

****ForExampleThis****

1. Add a song to database.

By choosing this option the program will then expect a couple of inputs from you in the following order:

Title of the song, Performer, Album, Release year, Genre and Duration of the song (minutes and then seconds).

The program is Case Sensitive and requires no spaces in between TheWords. So, it is important to type the details of the song,

in Title Case if it is only one word and in Title Case with NoSpaces between the words if there are more than one word.

After you have done the typing you need to press Enter in order to go to the next input section until the "SAVED!" message appears on your screen. It would mean that you have successfully saved your song in to database.

2. Display all song of one specific artist

By choosing this option the program will then expect one input from you. You need to provide the Artist's or Group's name in Title Case and with no spaces between TheWords.

After pressing Enter you will see the name of the artist's songs if there is any in database.

The limit is 100 symbols for each input

3. Display all songs released in specific year

By choosing this option the program will then expect one input from you. You need to provide a year in four digits.

After pressing Enter you will see the name of the songs that were released in this year if there is any in database.

4. Display all songs of the same genre

By choosing this option the program will then expect one input from you. You need to provide the genre in Title Case and with no spaces between TheWords.

After pressing Enter you will see the name of the songs of that genre if there is any in database.

5. Display details of all songs in an album

By choosing this option the program will then expect two inputs from you, in case different artists have the albums with the same name. First, you need to provide the album's name in Title Case and with no spaces between TheWords.

Second, you need to provide the artist's name in Title Case and with no spaces between TheWords

After pressing Enter you will see all details of the songs of that artist's album if there is any in database.
